Target information

Symbol	SNRPA
Full name	small nuclear ribonucleoprotein polypeptide A
Synonyms	U1A; Mud1; U1-A
Swissprot	P09012

Target Background

The protein encoded by this gene associates with stem loop II of the U1 small nuclear ribonucleoprotein, which binds the 5' splice site of precursor mRNAs and is required for splicing. The encoded protein autoregulates itself by polyadenylation inhibition of its own pre-mRNA via dimerization and has been implicated in the coupling of splicing and polyadenylation.
