### 技术规格

<b>Background:</b>	Anterior gradient protein 2 homolog (AGR2) is a human protein originally discovered in <i>Xenopus laevis</i> , encoded for by the gene of the same name. In <i>Xenopus</i> AGR2 is an important role in cement gland differentiation, however in human cancer cell lines high levels of AGR2 correlate with reduction of the p53 response and AGR2 levels are elevated in the preneoplastic tissue Barrett's oesophagus.
