技术规格

**Background:** 

The protein encoded by this gene is the alpha subunit of the heterodimeric receptor for colony stimulating factor 2, a cytokine which controls the production, differentiation, a nd function of granulocytes and macrophages. The encod ed protein is a member of the cytokine family of receptor s. This gene is found in the pseudoautosomal region (PAR ) of the X and Y chromosomes. Multiple transcript variant s encoding different isoforms have been found for this ge ne, with some of the isoforms being membrane-bound an d others being soluble.
