Background:	This gene is the putative transforming gene of avian sarcoma virus 17. It encodes a protein which is highly similar to the viral protein, and which interacts directly with specific target DNA sequences to regulate gene expression. This gene is intronless and is mapped to 1p32-p31, a chromosomal region involved in both translocations and deletions in human malignancies.
Applications:	WB
Name of antibody:	JUN(Ab-63)
Immunogen:	Synthesized non-phosphopeptide derived from human c-Jun around the phosphorylation site of Serine 63.

SwissProt:	P05412
WB Predicted band size:	36 kDa
WB Positive control:	293 cells lysate
WB Recommended dilution:	500-3000
