技术规格

Background:	This gene is the putative transforming gene of avian sarcoma virus 17. It encodes a protein which is highly similar to the viral protein, and which interacts directly with specific target DNA sequences to regulate gene expression. This gene is intronless and is mapped to 1p32-p31, a chromosomal region involved in both translocations and deletions in human malignancies.
Applications:	WB, IHC
Name of antibody:	JUN(Ab-243)
Immunogen:	Synthesized non-phosphopeptide derived from human c-Jun around the phosphorylation site of serine 243.
Full name:	jun proto-oncogene
Synonyms :	AP1; AP-1; c-Jun

SwissProt:	P05412
IHC positive control:	Human brain tissue
IHC Recommend dilution:	50-100
