技术规格

Background:	DiGeorge syndrome, and more widely, the CATCH 22 syndrome, are associated with microdeletions in chromosomal region 22q11.2. The product of this gene shares homology with the Drosophila melanogaster gonadal protein, which participates in gonadal and germ cell development, and with the gamma-1 subunit of human laminin. This gene is a candidate for involvement in DiGeorge syndrome pathology and in schizophrenia.
Applications:	ELISA, WB, IHC
Name of antibody:	DGCR6
Immunogen:	Synthetic peptide of human DGCR6

Full name:	DiGeorge syndrome critical region gene 6
SwissProt:	Q14129

IHC positive control:	Human brain;Human lung cancer
IHC Recommend dilution:	25-100
WB Predicted band size:	25 kDa
